Intersection of Three Planes

Diagram	Description of Planes	Normal Vectors Comparison	# of Solution
			
			
			
			
			
			
			
			

Example 1: Determine the intersection of the planes and classify the planes.

$$3x + 2y + 4z = 9$$
$$x - y + 3z = -2$$
$$x + 4y - 3z = 14$$

Example 2: Determine the intersection of the planes and classify the planes.

$$x + y + 2z = -2$$
$$3x - y + 14z = 6$$
$$x + 2y = -5$$
